

# Fragmentation functions as probes for the transversity distribution

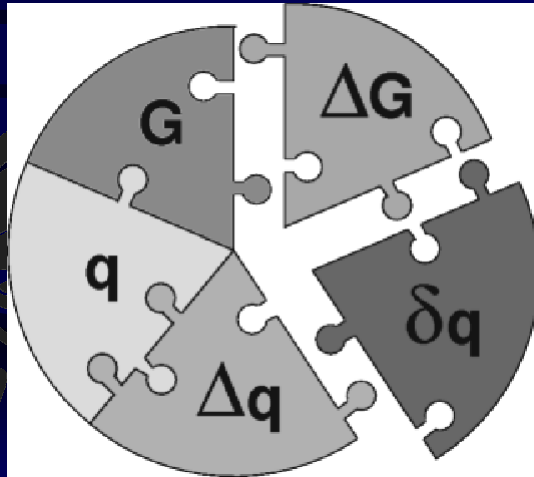

Alessandro Bacchetta

*vrije* Universiteit *amsterdam*

## Outline

- The transversity distribution
- The Collins fragmentation function
- Polarized  $\Lambda$  fragmentation
- 2-hadron interference fragmentation
- Spin-1 fragmentation
- Conclusions

# The puzzle of the distribution functions

29 Nov 2001

A. Bacchetta - Fragmentation to probe transversity

3

# Semi-inclusive DIS

$$d\sigma (l+H \rightarrow l'+h+X) \propto L_{\mu\nu} W^{\mu\nu}$$

$$2M W^{\mu\nu} \propto \text{Tr}[\Phi(x_B) \gamma^\mu \Delta(z_h) \gamma^\nu]$$

4

# Different ways to see the distribution functions

## 1. Operator decomposition of the correlation function

$$\Phi(x) = \frac{1}{2} \left\{ f_1(x) + g_1(x) \gamma_5 S_L + h_1(x) \gamma_5 \not{x}_T \right\} \gamma^-$$

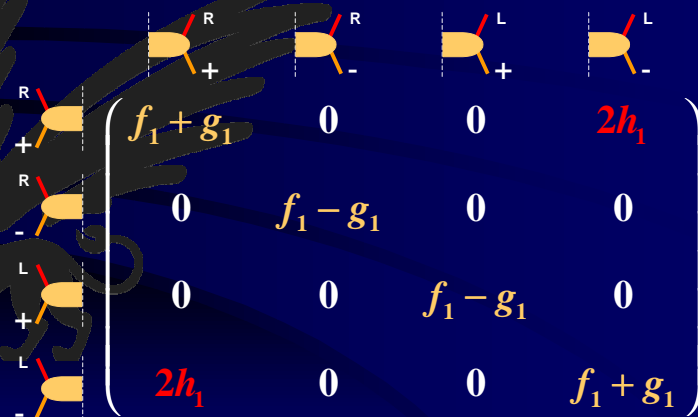

$q$ 
 $\Delta q$ 
 $\delta q$

NOTE: no intrinsic transverse momentum is included!

# Different ways to see the distribution functions

## 3. Matrix elements in hadron spin space $\otimes$ parton chirality space

*A.B., M. Boglione, A. Henneman, P. Mulders, PRL 85 (2000)*

## Different ways to see the distribution functions

$$f_1 = \frac{1}{2} \left( \begin{array}{c} R \quad R \\ | \quad | \\ \text{---} \\ | \quad | \\ + \quad + \end{array} + \begin{array}{c} L \quad L \\ | \quad | \\ \text{---} \\ | \quad | \\ + \quad + \end{array} \right)$$

$$g_1 = \frac{1}{2} \left( \begin{array}{c} R \quad R \\ | \quad | \\ \text{---} \\ | \quad | \\ + \quad + \end{array} - \begin{array}{c} L \quad L \\ | \quad | \\ \text{---} \\ | \quad | \\ + \quad + \end{array} \right)$$

$$h_1 = \frac{1}{2} \left( \begin{array}{c} R \quad L \\ | \quad | \\ \text{---} \\ | \quad | \\ + \quad - \end{array} \right)$$

29 Nov 2001

A. Bacchetta - Fragmentation to probe transversity

7

## An example of the relevance of transversity

$$f_1 = \left( \begin{array}{c} L \quad L \\ | \quad | \\ \text{---} \\ | \quad | \\ + \quad + \end{array} \right)$$

$$g_1 = \left( \begin{array}{c} L \quad L \\ | \quad | \\ \text{---} \\ | \quad | \\ + \quad + \end{array} - \begin{array}{c} L \quad L \\ | \quad | \\ \text{---} \\ | \quad | \\ + \quad + \end{array} \right)$$

$$h_1 = \frac{1}{2} (f_1 + g_1) = 0$$

Suppose we can describe the non-perturbative dynamics as an exchange of a scalar particle.

29 Nov 2001

8

## An example of the relevance of transversity

$$f_1 = \begin{array}{c} \text{R} \quad \text{R} \\ \diagdown \quad \diagup \\ \text{=} \\ \diagup \quad \diagdown \\ \text{+} \quad \text{+} \end{array}$$

$$g_1 = \begin{array}{c} \text{R} \quad \text{R} \\ \diagdown \quad \diagup \\ \text{=} \\ \diagup \quad \diagdown \\ \text{+} \quad \text{+} \end{array}$$

$$h_1 = \begin{array}{c} \text{R} \quad \text{L} \\ \diagdown \quad \diagup \\ \text{=} \\ \diagup \quad \diagdown \\ \text{+} \quad \text{-} \end{array}$$

$$\gamma^\mu \text{---} \text{=} \text{Vector diquark}$$

Suppose we can describe the non-perturbative dynamics as an exchange of a vector particle.
