Polarized Λ production

$$d^7\sigma^\uparrow + d^7\sigma^\downarrow \propto \left(1 - y + \frac{y^2}{2}\right) f_1(x) D_1(z) \mathcal{BW}(M^2; M_\Lambda^2)$$

Extremely sharp Breit-Wigner
invariant mass distribution

We can perform the integration over four variables

$$\int dM^2 d\theta_R d\phi_R d\phi_S (d^7\sigma^\uparrow + d^7\sigma^\downarrow) \propto 2\pi \left(1 - y + \frac{y^2}{2}\right) f_1(x) D_1(z)$$

Polarized Λ production

$$d^7\sigma^\uparrow - d^7\sigma^\downarrow \propto (1 - y) \cos(\phi_h + \phi_R) h_1(x) H_1(z) \alpha \sin_R \mathcal{BW}(M^2; M_\Lambda^2)$$

Transversity

Λ transversity fragmentation
function

We can perform the integration over four variables

$$\int dM^2 d\theta_R d\phi_R d\phi_S \cos(\phi_R + \phi_S) (d^7\sigma^\uparrow - d^7\sigma^\downarrow) \propto \alpha 2\pi (1 - y) h_1(x) H_1(z)$$

Asymmetry for Λ production

$$A_T \langle \cos(\phi_h + \phi_s) \rangle(x, y, z) = \frac{(1-y)}{\left(1-y + \frac{y^2}{2}\right)} \frac{h_1(x) \alpha H_1(z)}{f_1(x) D_1(z)}$$

$$\alpha = 0.642$$

29 Nov 2001

A. Bacchetta - Fragmentation to probe transversity

35

Estimates of Λ asymmetry

$$\frac{1}{\alpha} A_T \langle \cos(\phi_h + \phi_s) \rangle \approx 1.5 A_T \langle \cos(\phi_h + \phi_s) \rangle$$

All light quarks contribute equally to the Λ spin

The whole Λ spin is carried by the s quark

A. Bacchetta - Fragmentation to probe transversity

37

Λ production summary

- The Λ can easily be distinguished from the continuous background.
- The transversity fragmentation function is probably sizable, but is difficult to give a reliable estimate for the asymmetries.
- The evolution of the function is known.

A. Bacchetta - Fragmentation to probe transversity

38

Two-pion fragmentation

$$d^7\sigma^\uparrow + d^7\sigma^\downarrow \propto \left(1 - y + \frac{y^2}{2}\right) f_1(x) D_1(z, \theta_R, \phi_R, M^2)$$

We can perform the integration over three variables

$$\int d\theta_R d\phi_R d\phi_S (d^7\sigma^\uparrow + d^7\sigma^\downarrow) \propto 2\pi \left(1 - y + \frac{y^2}{2}\right) f_1(x) D_1(z, M^2)$$
