Collins Function

- $h_1$  chiral odd
  - ⇒ not accessible in inclusive DIS
  - ⇒ need some sort of quark polarimetry
- $k_{\perp}$ -dependent distribution functions (besides  $f_1$ ,  $g_1$ ,  $h_1$ )
  - ⇒ vanish when integrating over  $k_{\perp}$  (i.e. inclusive DIS)
  - ⇒ need to access  $k_{\perp}$ -dependence

- purities are completely unpolarized objects → present MC-tunes can be used
- probabilistic interpretation of purities possible
- these purities still depend on parametrization of Collins function
- easier: Sivers ← fragmentation function ( $D_1$ ) known
